

(multiple Cases to help prevent sharing errors)

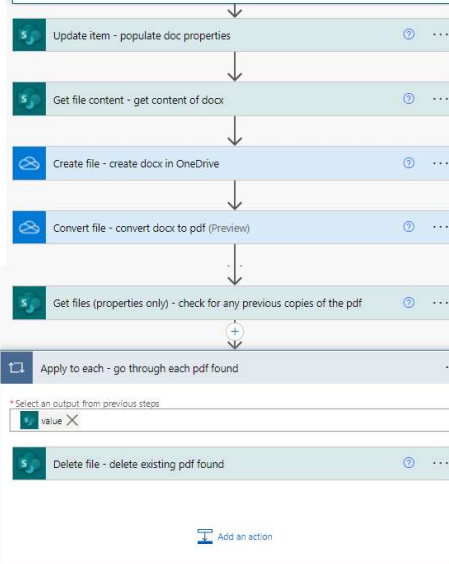

POST  
/validateUpdateListItem

```

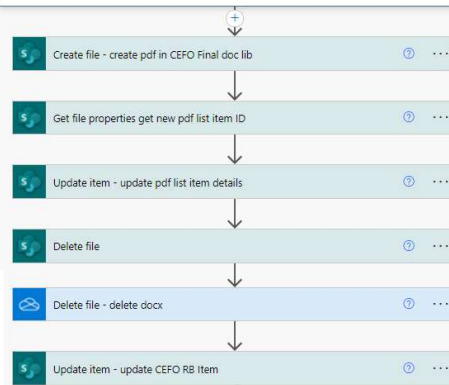

{
  "formValues": [
    {
      "FieldName": "FileLeafRef",
      "FieldValue": "{vTempFileName}"
    }
  ]
}
  
```

```

{
  "formValues": [
    {
      "FieldName": "FileLeafRef",
      "FieldValue": "variables('vTempFileName')"
    }
  ]
}
  
```

use Identifier

use File content from Convert file

use ItemId from the step above

now use the ID from the step above

get Identifier from the Update item - populate doc properties
